

3RD CELLFIT ANNUAL MEETING

THE EXTRACELLULAR VESICLES PARADIGM OF INTRA AND INTERCELLULAR COMMUNICATION

The aim of this symposium is to bring together researchers with diverse perspectives on various aspects of cell-cell communication, to share their findings on basic cell biology and translational advances. The prospective pooling of knowledge will drive future research agendas. The conference will emphasize the interdisciplinary approach needed to improve our ability to create complex in vitro chemical environments composed of precise molecule concentrations that will elucidate how biological processes are affected by biomolecules and their localized density.

Speakers will be encouraged to share their latest findings, discuss new methodologies, forge collaborations and consider new directions for the advancement of the field.

Themes:

- The role of extracellular vesicles in inter/intra cellular communication
- Inter-organ communication and signal integration in health and disease
- Integrated landscape of cell-cell communication and pathogenesis
